

Standard Costs and Variances

CHAPTER 10

PowerPoint Authors:

Susan Coomer Galbreath, Ph.D., CPA

Jon A. Booker, Ph.D., CPA, CIA

Cynthia J. Rooney, Ph.D., CPA

Basic Definitions and Concepts

Standards are benchmarks or “norms” for measuring performance. In managerial accounting, two types of standards are commonly used.

Price standards

specify how much should be paid for each unit of the input.

Quantity standards

specify how much of an input should be used to make a product or provide a service.

Examples: Firestone, Sears, McDonald's, hospitals, construction, and manufacturing companies.

Setting Direct Materials Standards

**Standard Price
per Unit**

Final, delivered
cost of materials,
net of discounts.

**Standard Quantity
per Unit**

Summarized in
a Bill of Materials.

Setting Direct Labor Standards

**Standard Rate
per Hour**

**Standard Hours
per Unit**

Often a single rate is used that reflects the mix of wages earned.

Use time and motion studies for each labor operation.

Setting Variable Manufacturing Overhead Standards

**Price
Standard**

The rate is the variable portion of the predetermined overhead rate.

**Quantity
Standard**

The quantity is the activity in the allocation base for predetermined overhead.

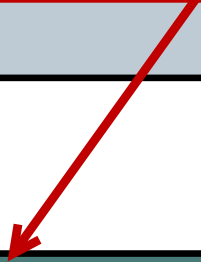

The Standard Cost Card

A standard cost card for one unit of product might look like this:

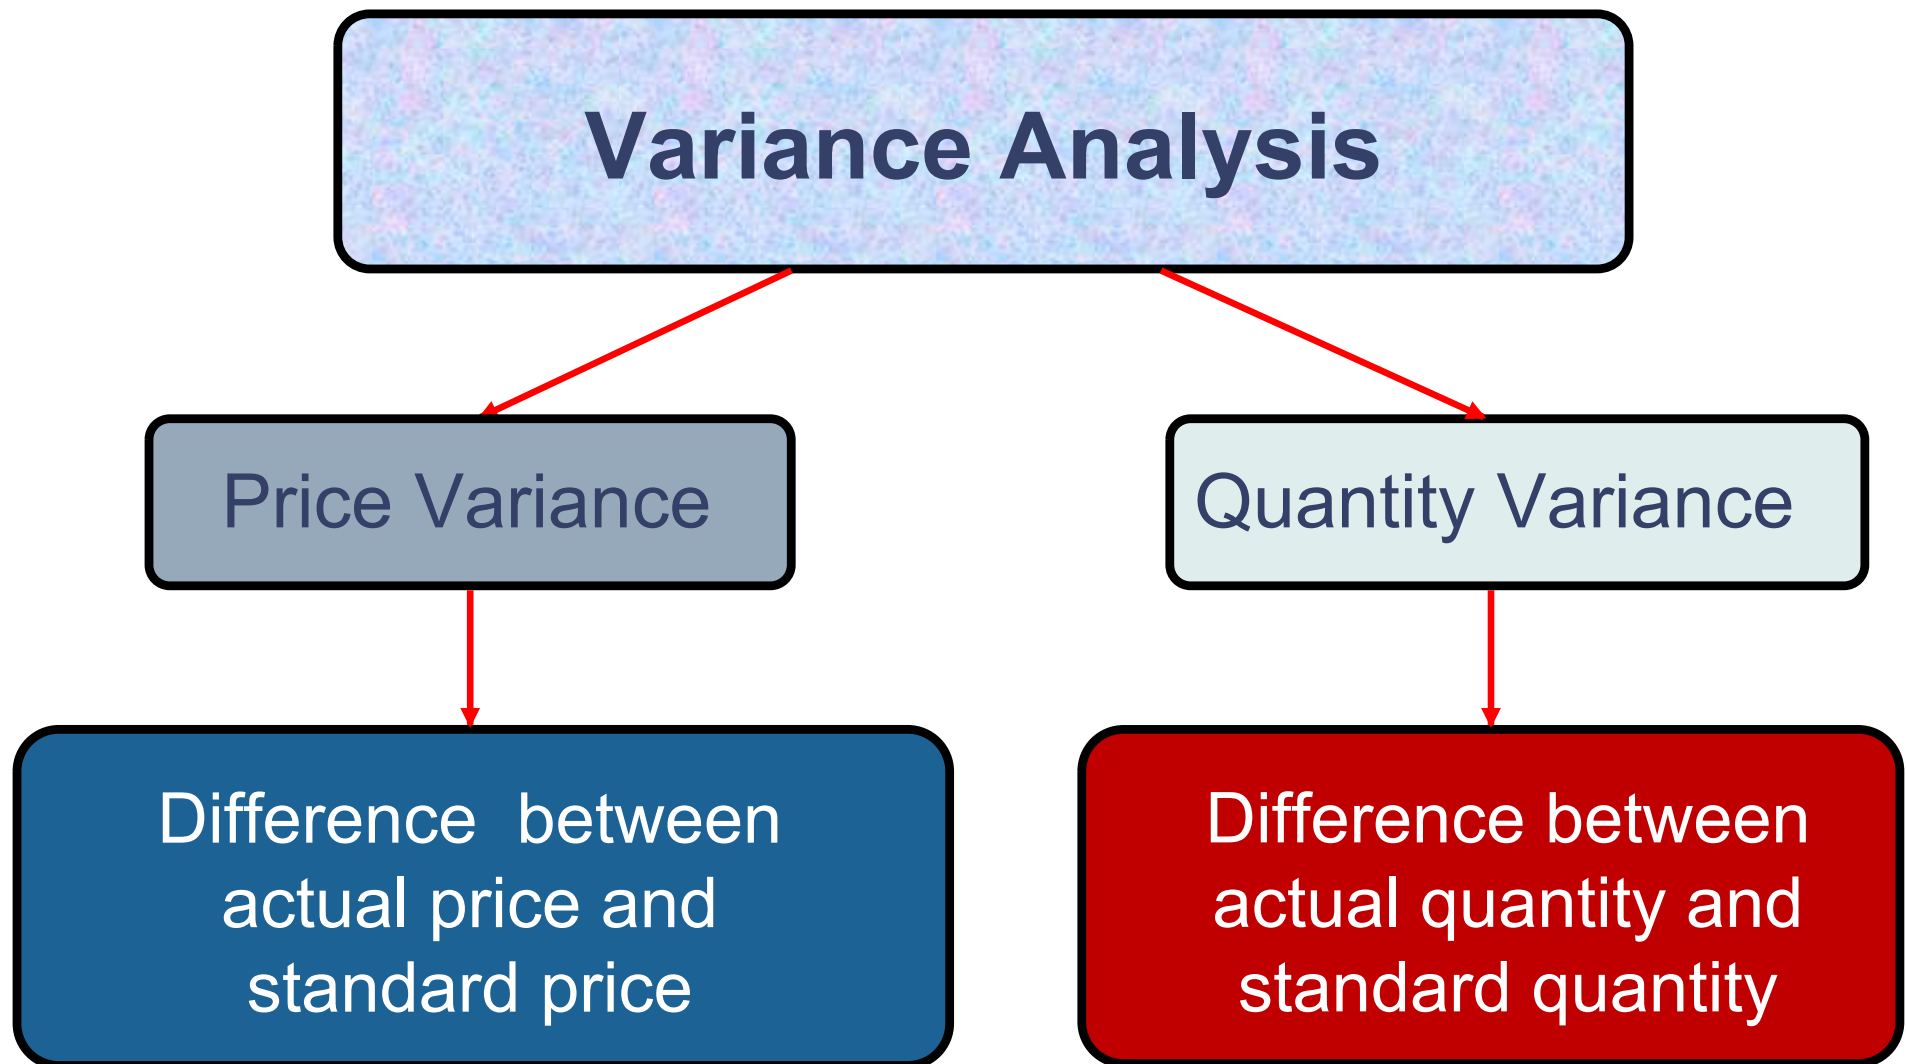

Using Standards in Flexible Budgets

Standard costs per unit for direct materials, direct labor, and variable manufacturing overhead can be used to compute **activity** and **spending** variances.

Spending variances become more useful by breaking them down into price and quantity variances.

General Model for Variance Analysis

Price and Quantity Standards

Price and quantity standards are determined separately for two reasons:

The purchasing manager is responsible for raw material purchase prices and the production manager is responsible for the quantity of raw material used.

The buying and using activities occur at different times. Raw material purchases may be held in inventory for a period of time before being used in production.

Variance Analysis

A General Model for Variance Analysis

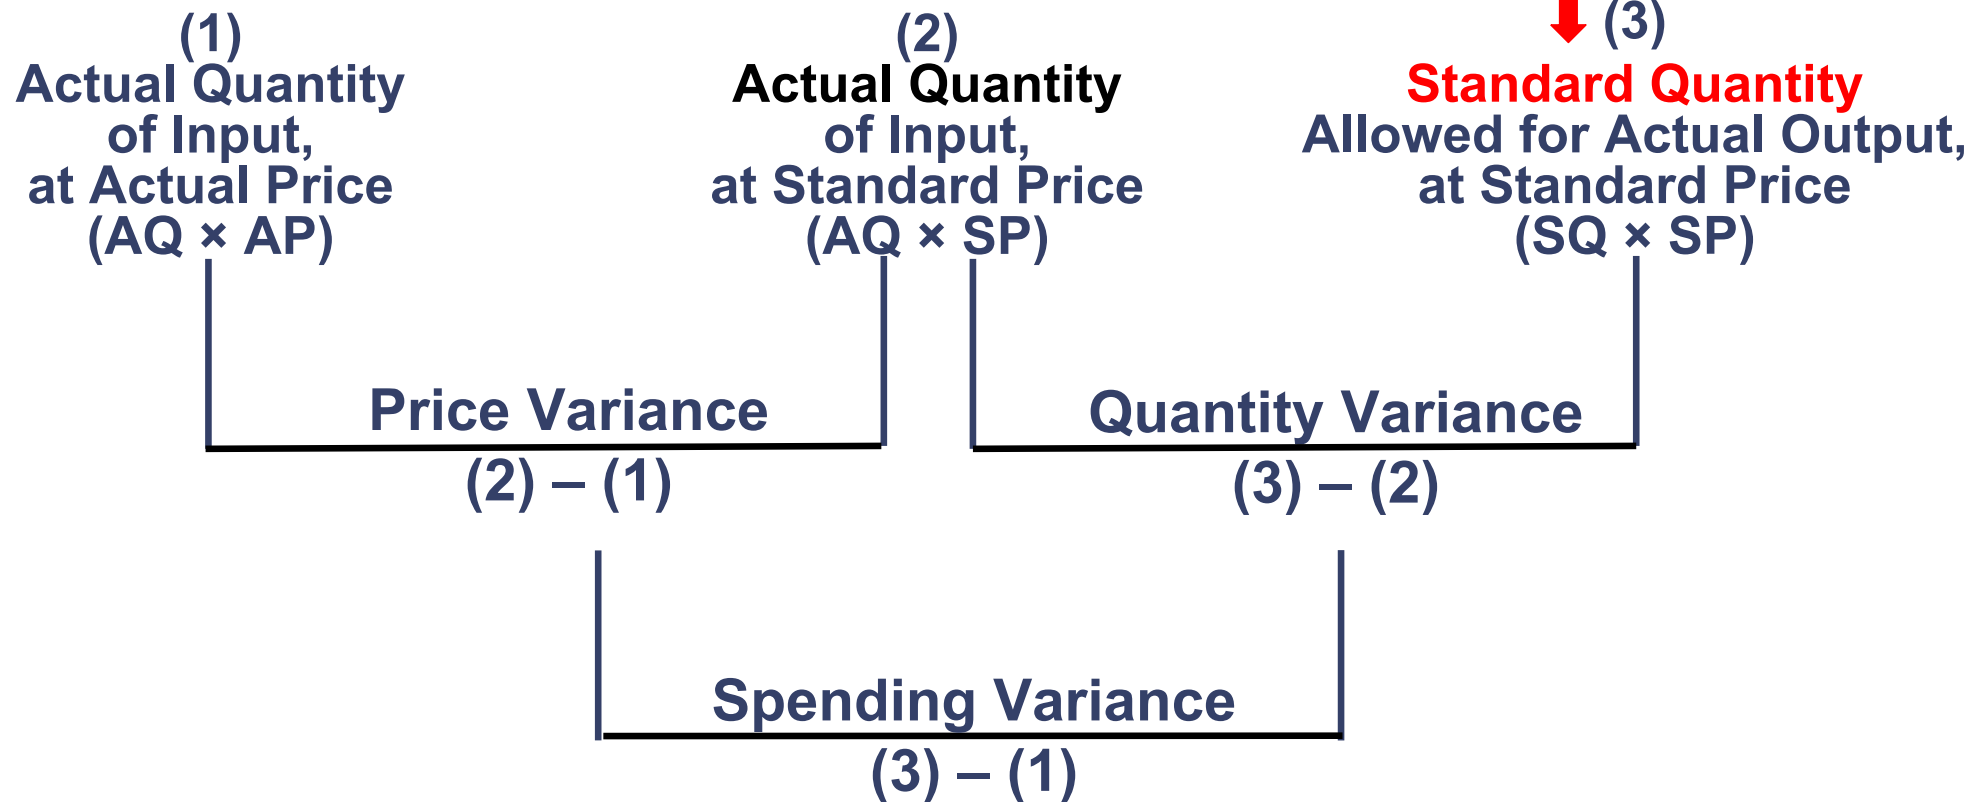

A General Model for Variance Analysis – Actual Quantity

Actual quantity is the amount of direct materials, direct labor, and variable manufacturing overhead actually used.

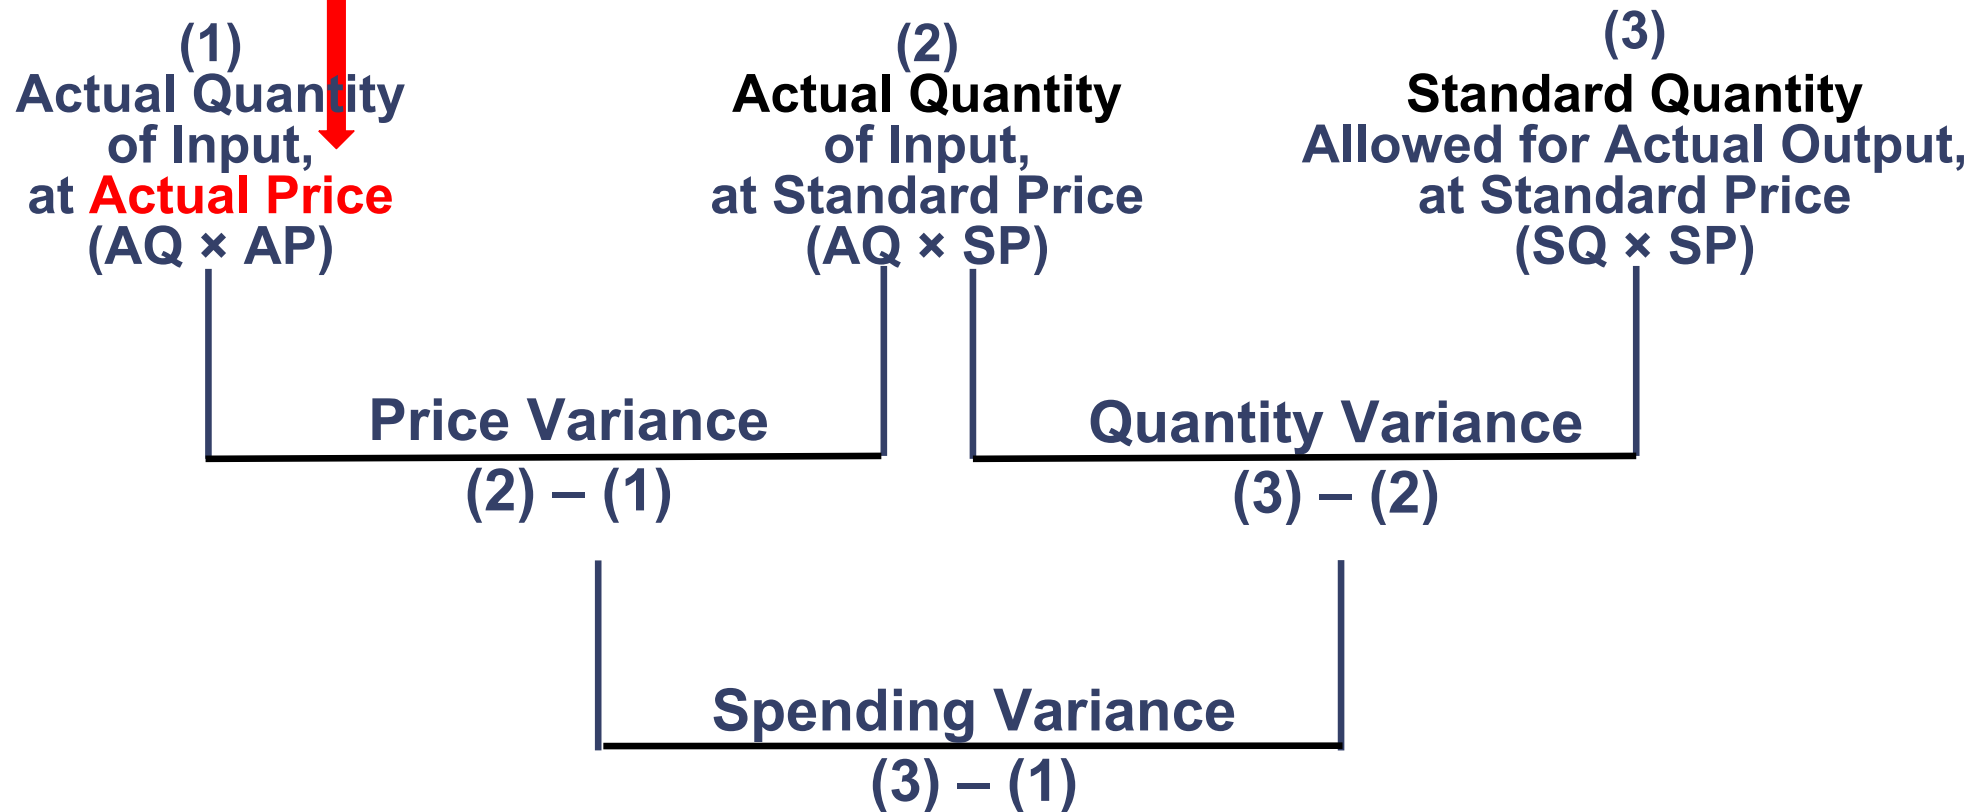

A General Model for Variance Analysis – Standard Quantity

Standard quantity is the standard quantity allowed for the actual output of the period.

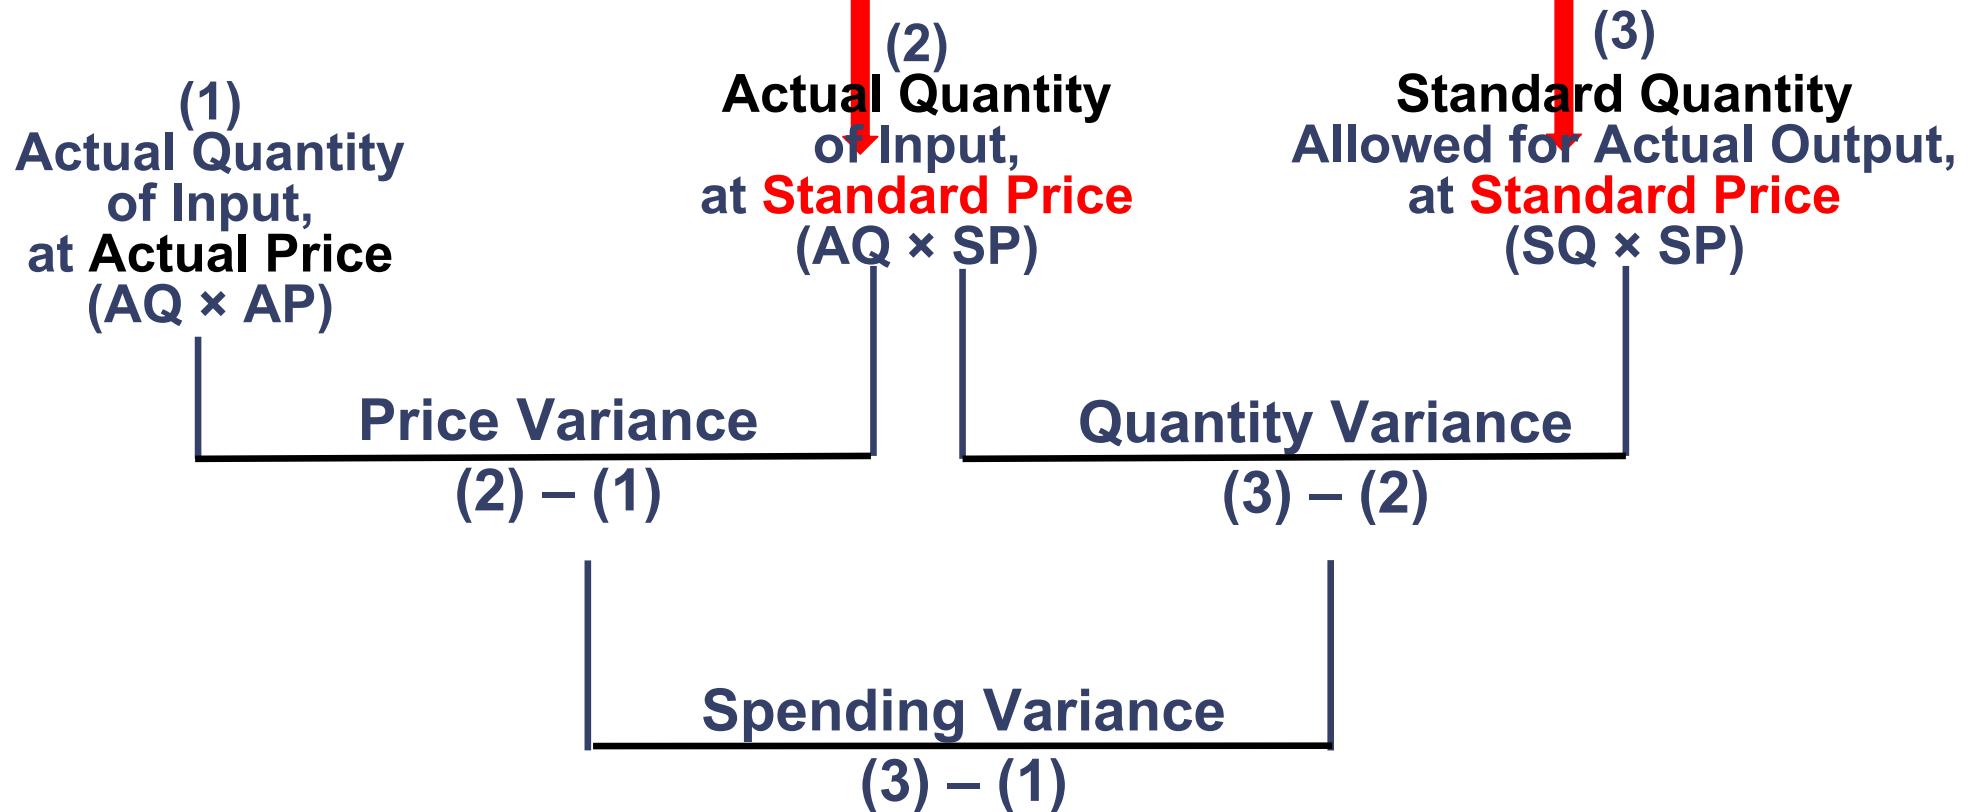

A General Model for Variance Analysis – Actual Price

Actual price is the amount actually paid for the input used.

A General Model for Variance Analysis – Standard Price

Standard price is the amount that should have been paid for the input used.

Learning Objective 1

Compute the direct materials price and quantity variances and explain their significance.

Materials Variances – An Example

Glacier Peak Outfitters has the following direct materials standard for the fiberfill in its mountain parka.

0.1 kg. of fiberfill per parka at \$5.00 per kg.

Last month 210 kgs. of fiberfill were purchased and used to make 2,000 parkas. The materials cost a total of \$1,029.

Materials Variances Summary – Part 1

Actual Quantity × Actual Price	Actual Quantity × Standard Price	Standard Quantity × Standard Price
210 kgs. × \$4.90 per kg. = \$1,029	210 kgs. × \$5.00 per kg. = \$1,050	200 kgs. × \$5.00 per kg. = \$1,000
 <p>Price variance \$21 favorable</p>		 <p>Quantity variance \$50 unfavorable</p>

Materials Variances Summary – Part 2

Actual Quantity × Actual Price	Actual Quantity × Standard Price	Standard Quantity × Standard Price
210 kgs. × \$4.90 per kg. = \$1,029	210 kgs. = \$1,050	200 kgs. × \$5.00 per kg. = \$1,000
<div>0.1 kg per parka × 2,000 parkas = 200 kgs</div>		
<div>Price variance \$21 favorable</div>		<div>Quantity variance \$50 unfavorable</div>

Materials Variances Summary – Part 3

Actual Quantity × Actual Price	Actual Quantity × Standard Price	Standard Quantity × Standard Price
210 kgs. × \$4.90 per kg. = \$1,029	210 kgs. \$1,029 ? 210 kgs = \$4.90 per kg = \$1,050	200 kgs. × \$5.00 per kg. = \$1,000
 <p>Price variance \$21 favorable</p>		 <p>Quantity variance \$50 unfavorable</p>

Materials Variances: Using the Factored Equations

Materials price variance

$$\begin{aligned}
 \text{MPV} &= (\text{AQ} \times \text{AP}) - (\text{AQ} \times \text{SP}) \\
 &= \text{AQ}(\text{AP} - \text{SP}) \\
 &= 210 \text{ kgs } (\$4.90/\text{kg} - \$5.00/\text{kg}) \\
 &= 210 \text{ kgs } (-\$0.10/\text{kg}) = \$21 \text{ F}
 \end{aligned}$$

Materials quantity variance

$$\begin{aligned}
 \text{MQV} &= (\text{AQ} \times \text{SP}) - (\text{SQ} \times \text{SP}) \\
 &= \text{SP}(\text{AQ} - \text{SQ}) \\
 &= \$5.00/\text{kg} (210 \text{ kgs} - (0.1 \text{ kg/parka} \times 2,000 \text{ parkas})) \\
 &= \$5.00/\text{kg} (210 \text{ kgs} - 200 \text{ kgs}) \\
 &= \$5.00/\text{kg} (10 \text{ kgs}) = \$50 \text{ U}
 \end{aligned}$$

Responsibility for Materials Variances

Who is responsible for the Materials Price Variance?

The Purchasing Manager

Who is responsible for the Materials Quantity Variance?

The Production Manager

The standard price is used to compute the quantity variance so that the production manager is not held responsible for the purchasing manager's performance.

Controllability of Materials Variances

The materials variances are not always entirely controllable by one person or department. For example:

The **production manager** may schedule production in such a way that it requires express delivery of raw materials resulting in an unfavorable materials price variance.

The **purchasing manager** may purchase lower quality raw materials resulting in an unfavorable materials quantity variance for the production manager.

Quick Check 1

Hanson Inc. has the following direct materials standard to manufacture one Zippy:

1.5 pounds per Zippy at \$4.00 per pound

Last week, 1,700 pounds of materials were purchased and used to make 1,000 Zippies. The materials cost a total of \$6,630.

Quick Check 1a

How many pounds of materials should Hanson have used to make 1,000 Zippies?

- a. 1,700 pounds.
- b. 1,500 pounds.
- c. 1,200 pounds.
- d. 1,000 pounds.

Quick Check 1b

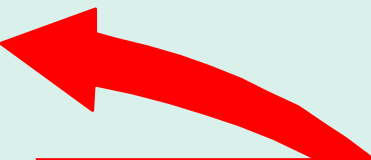

How many pounds of materials should Hanson have used to make 1,000 Zippies?

a. 1,700 pounds.

☒ b. 1,500 pounds.

c. 1,200 pounds.

d. 1,000 pounds.

The standard quantity is: $1,000 \times 1.5$ pounds per Zippy.

Quick Check 1c

Hanson's materials quantity variance (MQV) for the week was:

- a. \$170 unfavorable.
- b. \$170 favorable.
- c. \$800 unfavorable.
- d. \$800 favorable.

Quick Check 1d

Hanson's materials quantity variance (MQV) for the week was:

a. \$170 unfavorable.

b. \$170 favorable.

 c. \$800 unfavorable.

d. \$800 favorable.

$$\text{MQV} = \text{SP}(\text{AQ} - \text{SQ})$$

$$\text{MQV} = \$4.00(1,700 \text{ lbs} - 1,500 \text{ lbs})$$

$$\text{MQV} = \$800 \text{ unfavorable}$$

Quick Check 1e

Hanson's materials price variance (MPV) for the week was:

- a. \$170 unfavorable.
- b. \$170 favorable.
- c. \$800 unfavorable.
- d. \$800 favorable.

Quick Check 1f

Hanson's materials price variance (MPV) for the week was:

a. \$170 unfavorable.

☒ b. \$170 favorable.

c. \$800 unfavorable.

d. \$800 favorable.

$$\text{MPV} = \text{AQ}(\text{AP} - \text{SP})$$

$$\text{MPV} = 1,700 \text{ lbs.} \times (\$3.90 - 4.00)$$

$$\text{MPV} = \$170 \text{ Favorable}$$

Quick Check 1g

Actual Quantity
×
Actual Price

1,700 lbs.

×

\$3.90 per lb.

= \$6,630

Actual Quantity
×
Standard Price

1,700 lbs.

×

\$4.00 per lb.

= \$ 6,800

Standard Quantity
×
Standard Price

1,500 lbs.

×

\$4.00 per lb.

= \$6,000

Price variance
\$170 favorable

Quantity variance
\$800 unfavorable

Quick Check 1h

Recall that the standard quantity for 1,000 Zippies is $1,000 \times 1.5$ pounds per Zippy = 1,500 pounds.

Actual Quantity

×

Actual Price

1,700 lbs.

×

\$3.90 per lb.

= \$6,630

×

Standard Price

1,700 lbs.

×

Standard Price

1,500 lbs.

×

\$4.00 per lb.

= \$6,000

Price variance
\$170 favorable

Quantity variance
\$800 unfavorable

Learning Objective 2

Compute the direct labor rate and efficiency variances and explain their significance.

Labor Variances – An Example

Glacier Peak Outfitters has the following direct labor standard for its mountain parka.

1.2 standard hours per parka at \$10.00 per hour

Last month, employees actually worked 2,500 hours at a total labor cost of \$26,250 to make 2,000 parkas.

Labor Variances Summary – Part 1

Actual Hours × <u>Actual Rate</u>	Actual Hours × <u>Standard Rate</u>	Standard Hours × <u>Standard Rate</u>
2,500 hours × \$10.50 per hour = \$26,250	2,500 hours × \$10.00 per hour = \$25,000	2,400 hours × \$10.00 per hour = \$24,000
 Rate variance \$1,250 unfavorable		 <i>labor or inefficiency</i> Efficiency variance \$1,000 unfavorable

Labor Variances Summary – Part 2

Actual Hours × Actual Rate	Actual Hours × Standard Rate	Standard Hours × Standard Rate
2,500 hours × \$10.50 per hour	2,500 hours × \$10.00 per hour	2,400 hours × \$10.00 per hour
= \$26,250	= \$25,000	= \$24,000
Rate variance \$1,250 unfavorable		Efficiency variance \$1,000 unfavorable

1.2 hours per parka × 2,000 parkas = 2,400 hours

Labor Variances Summary – Part 3

Actual Hours × Actual Rate	Actual Hours × Standard Rate	Standard Hours × Standard Rate
2,500 hours × \$10.50 per hour = \$26,250	2,500 hours × \$10.00 per hour = \$25,000	2,400 hours × \$10.00 per hour = \$24,000
	<div style="border: 1px solid black; background-color: #e0f0ff; padding: 5px; display: inline-block;"> \$26,250 − \$25,000 = \$1,250 unfavorable </div>	
	<div style="border: 1px solid black; background-color: #e0f0ff; padding: 5px; display: inline-block;"> \$25,000 − \$24,000 = \$1,000 unfavorable </div>	
	Rate variance \$1,250 unfavorable	Efficiency variance \$1,000 unfavorable

Labor Variances: Using the Factored Equations

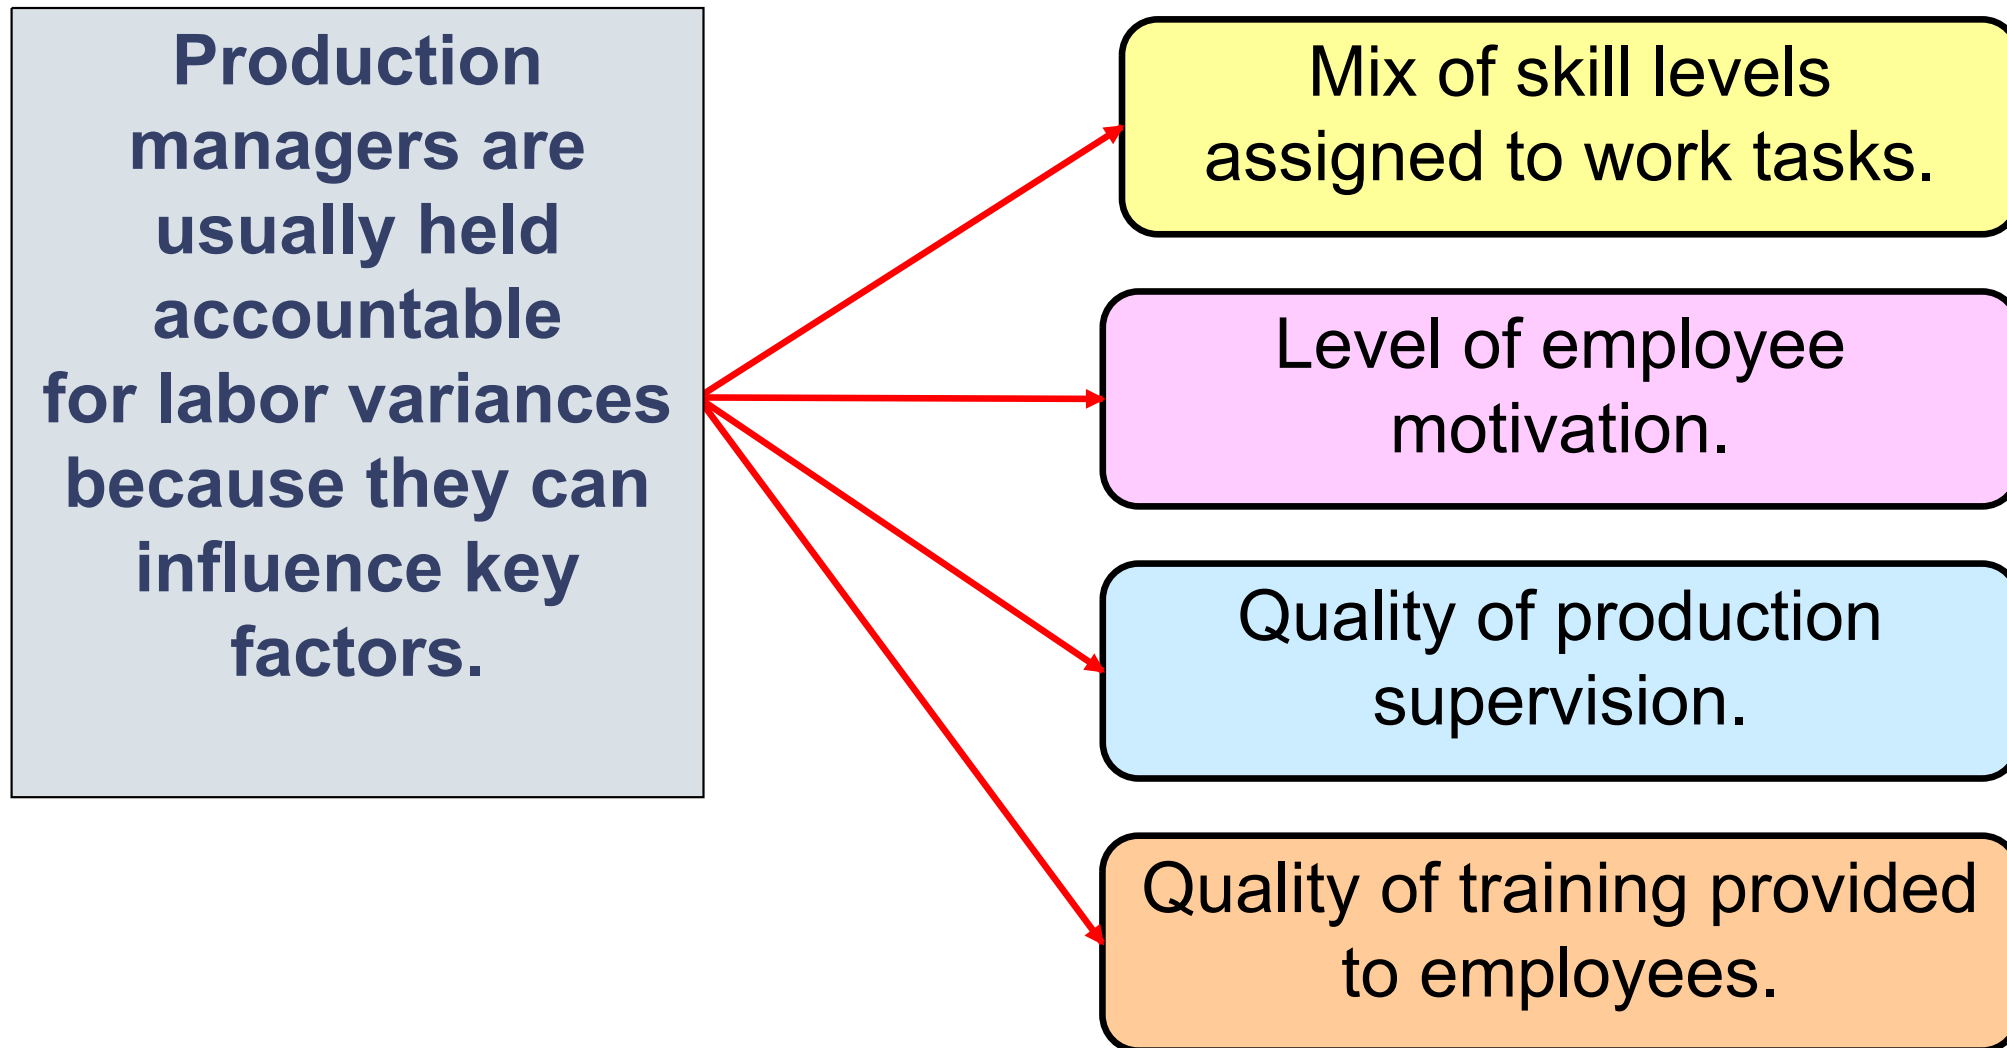

Labor rate variance

$$\begin{aligned}\text{LRV} &= (\text{AH} \times \text{AR}) - (\text{AH} \times \text{SR}) \\ &= \text{AH} (\text{AR} - \text{SR}) \\ &= 2,500 \text{ hours } (\$10.50 \text{ per hour} - \$10.00 \text{ per hour}) \\ &= 2,500 \text{ hours } (\$0.50 \text{ per hour}) \\ &= \$1,250 \text{ unfavorable}\end{aligned}$$

Labor efficiency variance

$$\begin{aligned}\text{LEV} &= (\text{AH} \times \text{SR}) - (\text{SH} \times \text{SR}) \\ &= \text{SR} (\text{AH} - \text{SH}) \\ &= \$10.00 \text{ per hour } (2,500 \text{ hours} - 2,400 \text{ hours}) \\ &= \$10.00 \text{ per hour } (100 \text{ hours}) \\ &= \$1,000 \text{ unfavorable}\end{aligned}$$

Responsibility for Labor Variances

Controllability of Labor Variances

The labor variances are not always entirely controllable by one person or department. For example:

The **Maintenance Department Manager** may do a poor job of maintaining production equipment. This may increase the processing time required per unit, thereby causing an unfavorable labor efficiency variance.

The **Purchasing Manager** may purchase lower quality raw materials resulting in an unfavorable labor efficiency variance for the production manager.

Quick Check 2

Hanson Inc. has the following direct labor standard to manufacture one Zippy:

**1.5 standard hours per Zippy at
\$12.00 per direct labor hour**

Last week, 1,550 direct labor hours were worked at a total labor cost of \$18,910 to make 1,000 Zippies.

Quick Check 2a

Hanson's labor rate variance (LRV) for the week was:

- a. \$310 unfavorable.
- b. \$310 favorable.
- c. \$300 unfavorable.
- d. \$300 favorable.

Quick Check 2b

Hanson's labor rate variance (LRV) for the week was:

a. \$310 unfavorable.

b. \$310 favorable.

c. \$300 unfavorable.

d. \$300 favorable.

$$\text{LRV} = \text{AH}(\text{AR} - \text{SR})$$

$$\text{LRV} = 1,550 \text{ hrs.}(\$12.20 - \$12.00)$$

$$\text{LRV} = \$310 \text{ unfavorable}$$

Quick Check 2c

Hanson's labor efficiency variance (LEV) for the week was:

- a. \$590 unfavorable.
- b. \$590 favorable.
- c. \$600 unfavorable.
- d. \$600 favorable.

Quick Check 2d

Hanson's labor efficiency variance (LEV) for the week was:

- a. \$590 unfavorable.
- b. \$590 favorable.
- c. \$600 unfavorable.**
- d. \$600 favorable.

$$\text{LEV} = \text{SR}(\text{AH} - \text{SH})$$

$$\text{LEV} = \$12.00(1,550 \text{ hrs.} - 1,500 \text{ hrs.})$$

$$\text{LEV} = \$600 \text{ unfavorable}$$

Quick Check 2e

Actual Hours × Actual Rate	Actual Hours × Standard Rate	Standard Hours × Standard Rate
<hr/> 1,550 hours × \$12.20 per hour = \$18,910	<hr/> 1,550 hours × \$12.00 per hour = \$18,600	<hr/> 1,500 hours × \$12.00 per hour = \$18,000
		
Rate variance \$310 unfavorable		Efficiency variance \$600 unfavorable

Learning Objective 3

Compute the variable manufacturing overhead rate and efficiency variances and explain their significance.

Variable Manufacturing Overhead Variances – An Example

Glacier Peak Outfitters uses direct labor-hours as the allocation base in its predetermined overhead rate. The company has the following standard variable manufacturing overhead cost for each mountain parka:

1.2 standard labor-hours per parka at \$4.00 per labor-hour

Last month, employees actually worked 2,500 labor-hours to make 2,000 parkas. Actual variable manufacturing overhead for the month was \$10,500.

Variable Manufacturing Overhead Variances Summary – Part 1

Actual Hours × Actual Rate	Actual Hours × Standard Rate	Standard Hours × Standard Rate
<u>2,500 hours</u>	<u>2,500 hours</u>	<u>2,400 hours</u>
× \$4.20 per hour	× \$4.00 per hour	× \$4.00 per hour
= \$10,500	= \$10,000	= \$9,600
 <p>Rate variance \$500 unfavorable</p>		 <p>Efficiency variance \$400 unfavorable</p>

Variable Manufacturing Overhead Variances Summary – Part 2

Actual Hours × Actual Rate	Actual Hours × Standard Rate	Standard Hours × Standard Rate
2,500 hours × \$4.20 per hour = \$10,500	2,500 hours × 1.2 labor-hours per parka [?] 2,000 parkas = 2,400 hours = \$10,000	2,400 hours × \$4.00 per hour = \$9,600
Rate variance \$500 unfavorable		Efficiency variance \$400 unfavorable

Variable Manufacturing Overhead Variances Summary – Part 3

Actual Hours × Actual Rate	Actual Hours × Standard Rate	Standard Hours × Standard Rate
2,500 hours × \$4.20 per hour = \$10,500	2,500 hours × \$4.00 per hour = \$10,000	2,400 hours × \$4.00 per hour = \$9,600
<div style="border: 1px solid black; padding: 5px; display: inline-block;"> \$10,500 − \$9,600 = \$900 unfavorable </div>		
<div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;"> <p>Rate variance</p> <p>\$500 unfavorable</p> </div> <div style="text-align: center;"> <p>Efficiency variance</p> <p>\$400 unfavorable</p> </div> </div>		

Variable Manufacturing Overhead Variances: Using Factored Equations

Variable manufacturing overhead rate variance

$$\begin{aligned}\text{VMRV} &= (\text{AH} \times \text{AR}) - (\text{AH} \times \text{SR}) \\ &= \text{AH} (\text{AR} - \text{SR}) \\ &= 2,500 \text{ hours } (\$4.20 \text{ per hour} - \$4.00 \text{ per hour}) \\ &= 2,500 \text{ hours } (\$0.20 \text{ per hour}) \\ &= \$500 \text{ unfavorable}\end{aligned}$$

Variable manufacturing overhead efficiency variance

$$\begin{aligned}\text{VMEV} &= (\text{AH} \times \text{SR}) - (\text{SH} \times \text{SR}) \\ &= \text{SR} (\text{AH} - \text{SH}) \\ &= \$4.00 \text{ per hour } (2,500 \text{ hours} - 2,400 \text{ hours}) \\ &= \$4.00 \text{ per hour } (100 \text{ hours}) \\ &= \$400 \text{ unfavorable}\end{aligned}$$

Quick Check 3

Hanson Inc. has the following variable manufacturing overhead standard to manufacture one Zippy:

**1.5 standard labor-hours per Zippy at
\$3.00 per direct labor-hour**

Last week, 1,550 labor-hours were worked to make 1,000 Zippies, and \$5,115 was spent for variable manufacturing overhead.

Quick Check 3a

Hanson's rate variance (VMRV) for variable manufacturing overhead for the week was:

- a. \$465 unfavorable.
- b. \$400 favorable.
- c. \$335 unfavorable.
- d. \$300 favorable.

Quick Check 3b

Hanson's rate variance (VMRV) for variable manufacturing overhead for the week was:

a. \$465 unfavorable.

b. \$400 favorable.

c. \$335 unfavorable.

d. \$300 favorable.

$$\text{VMRV} = \text{AH}(\text{AR} - \text{SR})$$

$$\text{VMRV} = 1,550 \text{ hrs.}(\$3.30 - \$3.00)$$

$$\text{VMRV} = \$465 \text{ unfavorable}$$

Quick Check 3c

Hanson's efficiency variance (VMEV) for variable manufacturing overhead for the week was:

- a. \$435 unfavorable.
- b. \$435 favorable.
- c. \$150 unfavorable.
- d. \$150 favorable.

Quick Check 3d

Hanson's efficiency variance (VMEV) for variable manufacturing overhead for the week was:

- a. \$435 unfavorable.
- b. \$435 favorable.
- ☒ c. \$150 unfavorable.
- d. \$150 favorable.

1,000 units × 1.5 hrs. per unit

$$\text{VMEV} = \text{SR}(\text{AH} - \text{SH})$$

$$\text{VMEV} = \$3.00(1,550 \text{ hrs.} - 1,500 \text{ hrs.})$$

$$\text{VMEV} = \$150 \text{ unfavorable}$$

Quick Check 3e

$$\begin{array}{r}
 \text{Actual Hours} \\
 \times \\
 \hline
 \text{Actual Rate} \\
 \hline
 1,550 \text{ hours} \\
 \times \\
 \$3.30 \text{ per hour} \\
 \hline
 = \$5,115
 \end{array}$$

$$\begin{array}{r}
 \text{Actual Hours} \\
 \times \\
 \hline
 \text{Standard Rate} \\
 \hline
 1,550 \text{ hours} \\
 \times \\
 \$3.00 \text{ per hour} \\
 \hline
 = \$4,650
 \end{array}$$

$$\begin{array}{r}

 \hline
 = \$4,500
 \end{array}$$

Rate variance
\$465 unfavorable

Efficiency variance
\$150 unfavorable

Materials Variances – An Important Subtlety

The quantity variance
is computed only on
the quantity **used**.

The price variance is
computed on the
entire quantity
purchased.

Materials Variances – An Important Subtlety: Example

Glacier Peak Outfitters has the following direct materials standard for the fiberfill in its mountain parka.

0.1 kg. of fiberfill per parka at \$5.00 per kg.

Last month, 210 kgs. of fiberfill were purchased at a cost of \$1,029. Glacier used 200 kgs. to make 2,000 parkas.

Materials Variances – An Important Subtlety: Example Solution

Actual Quantity Purchased × Actual Price	Actual Quantity Purchased × Standard Price	Actual Quantity Used × Standard Price	Standard Quantity × Standard Price
210 kgs. × \$4.90 per kg. = \$1,029	210 kgs. × \$5.00 per kg. = \$1,050	200 kgs. × \$5.00 per kg. = \$1,000	200 kgs. × \$5.00 per kg. = \$1,000
 <p>Price variance \$21 favorable</p>		 <p>Quantity variance \$0</p>	

Advantages of Standard Costs

Standard costs are a key element of the management by exception approach.

Standards can provide benchmarks that promote economy and efficiency.

Standards can greatly simplify bookkeeping.

Standards can support responsibility accounting systems.

Potential Problems with Standard Costs – Part 1

Standard cost variance reports are usually prepared on a monthly basis and may contain information that is outdated.

If variances are misused as a club to negatively reinforce employees, morale may suffer and employees may make dysfunctional decisions.

Labor variances assume that the production process is labor-paced and that labor is a variable cost. These assumptions are often invalid in today's automated manufacturing environment where employees are essentially a fixed cost.

Potential Problems with Standard Costs

–Part 2

Just meeting standards may not be sufficient; continuous improvement may be necessary to survive in a competitive environment.

In some cases, a “favorable” variance can be as bad or worse than an unfavorable variance.

Excessive emphasis on meeting the standards may overshadow other important objectives such as maintaining and improving quality, on-time delivery, and customer satisfaction.

End of Chapter 10
